Abstract

This is the continuously updated research draft. It may be incomplete or uneven, but every established conclusion must remain supported by the durable research artifacts and the provenance map in `manuscript-ai/PROVENANCE.md`.

1 Introduction

Describe the research question, motivation, contribution, and supported conclusions after the project contract is initialized.

2 Model and Definitions

State the formal model and definitions consistently with the current approved project contract.

3 Results

Include only results whose epistemic status is represented accurately in the research artifacts and manuscript provenance map.

4 Computational and Empirical Evidence

When applicable, describe reproducible experiments and distinguish empirical evidence from mathematical proof.

5 Related Work

Relate the project to precisely sourced literature, including differences in assumptions, models, and scope.

6 Discussion and Limitations

Explain limitations, boundary cases, negative results, and open questions.
